

## Business

 Infor FMS SunSystems v4 Business helps organizations better manage purchasing, inventory levels, and sales management across the entire enterprise.

### Do business better.

In today's increasingly competitive economic climate—when demands for more efficiency and control are being placed on all areas of the business—executives must find a way to continually improve the performance of the organization in all areas. To do so, they need a technology solution that will help them gain a broader perspective on the business and provide them with the ability to analyze, control, and improve operations.

### Leverage experience.

With more than 20 years of experience built in, Infor™ SunSystems v4 Business provides the order fulfillment functions executives need to better manage key aspects of business across the entire enterprise. And they don't have to give up operational flexibility to do it. Infor SunSystems v4 Business modules map to an organization's business processes, not the other way around. That's why companies around the globe are using Infor SunSystems v4 Business to do business better.

### Get business specific.

Infor SunSystems v4 Business helps organizations take control of sales, purchasing, and inventory management. All modules offer highly flexible coding; powerful reporting; and user-defined transaction types.

**Inventory Control.** Allows full visibility of product, intermediate, and raw material items, providing greater control over inventory without diminishing customer service. Features include:

- *Inventory tracking*—offers unique serial number checking on receipts; expiration date checking on issues and transfers; multiple picking methods; and allocation across multiple locations.
- *Flexible costing*—provides standard, latest, FIFO, or average costing; a usage history report; up to three currencies; and automatic currency translation on receipt.
- *Stock taking and checking*—features random, cyclical, and perpetual stock takes; interactive stock-take entry, inquiry, approval, and posting; inventory valuation; and report and approval of variances with tolerance check.

**Sales Order Management.** Sales Order Processing and Sales Invoicing components handle the entire process, from quotation to invoice. Features include:

- *Order/quotation/invoice entry*—provides account and non-account customers with information on—and the ability to order—stocked and non-stocked products. Also offers quotation, acknowledgment, picking, dispatch, and invoice documents, as well as customer credit checking.
- *Extensive analysis*—offers user-defined analysis headings, as well as ten analysis codes for each customer, product, and transaction. Has the ability to sub-divide analysis codes, providing sophisticated and virtually unlimited analytical capability.
- *Amount calculation*—based on customer, product, or quantity. Manages currencies, discounts, surcharges, and tax. Also offers secure, auditable override capability on order or invoice entry.

**Purchase Management.** Manages and simplifies the purchasing process. Purchase Order Processing and Purchase Invoice Register components make it possible to analyze and report on a comprehensive database of supplier information, improving buying power. Features include:

- *Order entry*—offers invoice, order, and debit entry; real-time funds/commitment checking; and separate invoice matching and approval stages.
- *Commitment accounting*—automatically tracks and updates soft, hard, and accrual commitments. Purchase order values generate commitments; approval of matched invoices reduces commitments. Full commitment reporting offers

comparisons to actuals.

- *Amount calculation*—based on supplier, product, or quantity. Converts purchase units to inventory units. Manages currencies, discounts, surcharges, and tax.

## See results now.

Infor FMS SunSystems v4 Business helps organizations practice true operational management and take better control of the business by providing immediate access to operational information as well as powerful reporting tools. Quick, easy implementation leads to fast ROI and low total cost of ownership over the long run.

## About Infor.

Infor acquires and develops functionally rich software backed by thousands of domain experts and then makes it better through continuous innovation, faster implementation options, global enablement, and flexible buying options. In a few short years, Infor has become the third largest provider of business software. For additional information, visit [www.infor.com](http://www.infor.com).
