

An ERP system that can be accessed anywhere is a must in today's fast moving world. With mobile fast becoming the device of choice it is imperative you can access and update the data stored in your ERP system on your tablet from any location. With this in mind we have developed 'Sysco Mobile'.

Sysco Mobile is an app that brings you all the features you need from [Microsoft Dynamics NAV](#) right to your Windows tablet. Sysco Mobile for Nav offers unique off-line synchronisation capabilities not available in the standard Nav application. This allows sales people and service engineers to operate off-line where an on-line connection is not available.

*"We use the mobile solution for our van sales operation. Our drivers work remotely on the sales app without a live connection to Microsoft Dynamics NAV during the day. We use the electronic signature function to capture customer signatures on screen. When the drivers return in the evening they sync all data (sales/stock transactions, signed delivery notes etc.) back into Dynamics NAV from their tablet. It's a robust and reliable system that provides secure data transfer, as well as efficiency savings in the office"*

James Doherty, Management Accountant, James Doherty (Meats)

### Easily configured

One of the greatest features of Dynamics NAV is how customisable it is and Sysco Mobile is no different. We know your company is unique and we can configure our App to suit your companies' unique needs.

### Offline capabilities

Sysco Mobile can operate without an internet connection. Any updates and amendments you make in offline mode will synchronize with the Dynamics NAV server next time you go online.

### User friendly

With its easy-to-use, intuitive interface you can use Sysco Mobile straight away with very little training.

### No 3rd Parties

When support issues arise it can be difficult when you have a support contract with a Microsoft Dynamics partner and another 3<sup>rd</sup> party software provider. Sysco support Dynamics Nav and Sysco Nav mobile as one solution. This way you have a 'one stop shop' when any issues arise within NAV, whether it be the mobile app or Dynamics NAV itself.

### Multiple Versions

We know that people need NAV on their tablets for a variety of reasons. Some people need tablet access to NAV walking around the warehouse floor, some people need to input sales orders into NAV on the road or check existing service requests. We have developed different models of Sysco Mobile to suit a variety of different industries and job roles.

## Sysco Mobile: Which version?

We have 3 versions of Sysco Mobile tailored to specific job roles. Select the version that fits you best.

Van Sales	Sales Rep	Service Engineer
Record Sales/Return Orders	All Van Sales features plus:	Accept/Reject Service Calls pushed to mobile from NAV
Amend Standing Orders	Access to Customer History from NAV	Record Parts used on jobs, equipment, add comments
Capture Customer Signature	View/Email PDF documents from NAV for customers – statements, invoices	Automatic time recording for travelling/labour
Print Delivery Dockets	Sales Figures	Capture Customer Signature
Access Stock Information, Customer Prices	Synchronise with NAV server throughout the day via wifi or 3G/4G connections for up to date information	Synchronise with NAV server throughout the day via wifi or 3G/4G connections for up to date information
Synchronise with Nav server via Wi-Fi at the end of each day or more frequently if required		

Don't see exactly what you need? **Create your own bundle** using any of the features from any of the above 3 columns and we'll give you a specific quote.
